# Verkasalon tuulivoimahanke

## MELU- JA VARJOSTUSMALLINNUKSEN TAVOITTEET

Verkasalon tuulivoimahankkeen hankeomistaja Winda Energy Oy suunnittelee vaihtoehdossa 1 (VE1) 28 voimalan rakentamista ja vaihtoehdossa 2 (VE2) 33 voimalan rakentamista Ylivieskan, Alavieskan ja Kalajoen kuntien alueelle. Tämä melu- ja varjostusmallinnusraportti on laadittu Verkasalon hankkeen YVA-menettelyvaiheen sijoitussuunnitelmien perusteella.

Tuulivoimaloiden aiheuttamia meluvaikutuksia on arvioitu WindPRO-ohjelman DECIBEL-moduulilla. Tuulivoimaloiden aiheuttamat varjostusvaikutukset on mallinnettu WindPro-ohjelman SHADOW-moduulilla. Melu- ja varjostusmallinnukset on laatinut Aarni Nikkola ja laaduntarkastuksen on tehnyt Johanna Harju FCG Finnish Consulting Group Oy:stä.

## LÄHTÖTIEDOT JA MENETELMÄT

### 2.1 Melu

#### 2.1.1 Melumallinnus ISO 9613-2

Tuulivoimaloiden aiheuttamat äänenpainetasot on mallinnettu WindPRO-laskentaohjelman Decibel-moduulilla ISO 9613-2 standardin mukaisesti. Ympäristöhallinnon tuulivoimaloiden melun mallintamista koskevan ohjeen 2/2014 mukaisesti tuulen nopeutena käytettiin 10 m korkeudella mitattuna 8 m/s, ilman lämpötilana 15 °C, ilmanpaineena 101,325 kPa, ilman suhteellisenä kosteutena 70 % ja maanpinnan kovuutena arvoa 0,4. Laskenta on tehty 4,0 m maan pinnan tasosta.

Verkasalon tuulivoimaloiden äänenpainetasot on mallinnettu molemmissa vaihtoehdoissa voimalaitostyyppillä Nordex N175-6.8MW 232,5 metriä korkealla tornilla ja 175 metrin roottorihalkaisijalla. Voimaloiden kokonaiskorkeus on näin ollen 320 metriä.

Voimalaitoksen N175-6.8 MW lähtömelutaso on 106,9 dB(A). Voimalaitosvalmistajan mukaan N175-6.8MW melutaso vastaa ylempää luottamusväliä 95 % ja on valmistajan mukaan melun takuuarvo, kun siihen lisätään 1,5 dB(A).

Tuulivoimahankkeiden yhteisvaikutuksia tarkasteltaessa on huomioitu Verkasalon hankkeen läheisyydessä sijaitsevan Hangaskurunkankaan tuulivoimahankkeen voimalat. Hangaskurunkankaan tuulivoimaloiden äänenpainetasot on Hangaskurunkankaan melumallinnusraportin (AFRY 2023) mallinnettu geneerisellä voimalaitostyyppillä, jonka roottorin halkaisija on 200 m. Lähtömelunatasona käytettiin Vestas V150 4/4.2 mukaista äänipäästötasoa 107,8 dB, johon lisättiin +2 dB:n varmuusarvo.

Melumallinnusten laskentatuloksia on havainnollistettu ns. keskiäänitasokarttojen avulla. Keskiäänitasokartoissa on melun keskiäänitaso- eli ekvivalenttiäänitasokäyrät (LAeq) 5 dB välein.

11.10.2023

**Taulukko 1. Verkasalon tuulivoimahankkeen mallinnusohjelma ja tuulivoimaloiden äänitehotasot voimalaitoksella N175-6,8 MW sekä melun erityispiirteet.**

### 2.1.2 Matalataajuinen melu

Matalataajuinen melu laskettiin Ympäristöministeriön ohjeen 2/2014 mukaisin menetelmin käyttäen voimalavalmistajilta saatuja arvioita niiden äänitehotasoista.

Ohje 2/2014 antaa menetelmän matalataajuisen melun laskentaan rakennusten ulkopuolelle. Sosiaali- ja terveysministeriön Asumisterveysasetus 2015 antaa matalataajuiseksi melulle toimenpiderajat asuinhuoneissa. Rakennusten sisälle kantautuva äänitaso arvioitiin Turun AMK:n (Keränen, Hakala

11.10.2023

ja Hongisto, 2018) julkistamien Anojanssi projektin tulosten mukaisten ääneneristävyyssarvoin ja tuloksia verrattiin toimenpiderajoihin.

*Taulukko 3. Suomalaisen pientalon julkisivun äänitasoeron alalikiarvo Anojanssi projektin tulosten mukaisesti.*

f [Hz]	20	25	31.5	40	50	63	80	100	125	160	200
DLo [dB]	7.6	8.3	9.2	10.3	11.5	13.0	14.8	16.8	18.8	21.1	22.8

Matalataajuisten melun laskelmassa huomioitiin maanpinnan muodon vaikutus ohjeen 4/2014 mukaisesti. Tulokset on esitetty taajuuskohtaisena taulukkona hankealuetta ympäröiville asuin- ja lomarakennuksille.

*Taulukko 4. Käytetyt mallinnusparametrit ISO 9613-2 laskelmissa sekä melulle altistuvat kohteet.*

## 2.2 Varjostusmallinnus

*Taulukko 5. Verkasalon tuulivoimahankkeen mallinnusohjelma ja tuulivoimaloiden koko varjostusmallinnuksissa.*

MALLINNUSOHJELMAN TIEDOT			
Mallinnusohjelma ja versio: WindPRO version 3.6.355		Mallinnusmenetelmä: ISO 9613-2	
TUULIVOIMALAN TIEDOT			
Tuulivoimalan valmistaja: Generic		Tyyppi: RD200	Sarjanumero/t: -
Nimellisteho: 7,2 MW	Napakorkeus: 220 m	Roottorin halkaisija: 200 m	Tornin tyyppi: teräs/hybridi

Verkasalon tuulivoimaloiden varjostusvaikutukset on mallinnettu käyttäen roottorinhalkaisijaltaan 200 metristä voimalaitosta 220 metriä korkealla tornilla. Kokonaiskorkeudeltaan voimala on mallinuksissa 320 metriä. Hangaskurunkankaan yhteisvaikutushankkeen voimaloina on käytetty roottorinhalkaisijaltaan ja napakorkeudeltaan 200 metrisiä voimaloita, voimaloiden kokonaiskorkeutena näin ollen 300 metriä.

Varjostusvaikutuksia mallinnettiin WindPRO-ohjelman Shadow-moduulilla. Laskennassa varjot huomioidaan, kun aurinko on yli 3 astetta horisontin yläpuolella. Varjoksi lasketaan tilanne, jossa siipi peittää vähintään 20 % auringosta.

Varjostusmallinnuksessa huomioidaan siiven lavan maksimileveys sekä siiven kärjen leveys 90 % etäisyydellä turbiinista. Mallinnuksessa siiven oletetaan kapenevan lineaarisesti kohti kärjen leveysarvoa.

Varjostusmallin laskennassa on huomioitu hankealueen korkeustiedot, tuulivoimaloiden sijainnit, tuulivoimalan napakorkeudet ja roottorin halkaisija sekä hankealueen aikavyöhyke. Mallinnuksessa otettiin huomioon auringon asema horisontissa eri kellon- ja vuodenaikoina, pilvisuus kuukausittain eli kuinka paljon aurinko paistaa ollessaan horisontin yläpuolella sekä tuulivoimalaitosten arvioitu vuotuinen käyntiaika.

Varjostuksen tarkastelukorkeutena lähialueen asuin- tai lomarakennusten pihapiirissä käytettiin 1,0 metriä ja laskenta-alueen kokoa 5,0 x 5,0 metriä. Laskentaikkunoiden suunnat asennettiin voimaloita kohti ns. "greenhouse mode".

Auringon keskimääräiset paistetunnit perustuvat Oulunsalon Oulun lentoaseman sääaseman mitattuihin säätietoihin vuosilta 1981 - 2010. Laskentojen tuulen suunta ja nopeusjakamana käytettiin NASA:n MERRA-dataa (Modern Era Retrospective-analysis for Research and Applications) hankealueen läheisyydeltä.

Puuston huomioivassa varjostusmallinnuksissa (Luke forest) on huomioitu puuston peittävyys käytämällä Luonnonvarakeskuksen vuoden 2021 puuston keskipituus aineistoa.

Varjostusmallinnuksen tuloksia on havainnollistettu kartan avulla. Kartalla esitetään varjostusvaikutuksen (1, 8 ja 20 tuntia vuodessa) laajuus. Sen lisäksi mallinnuksessa on erikseen laskettu vaikutus tuulivoimahankealueen ympäristössä oleviin herkkiin kohteisiin.

11.10.2023

## 2.3 Raja- ja ohjearvot

### 2.3.1 Melu

Valtioneuvoston asetuksessa (1107/2015) tuulivoimaloille on määritelty suunnitteluarvot päivä- ja yöajan keskiäänitasojen maksimiarvolle. Jos tuulivoimalan melu sisältää tonaalisia, kapeakaistaisia tai impulssimaisia komponentteja, tai se on selvästi amplitudimoduloitunutta, mallinnustuloksiin tulee ohjeen mukaan lisätä viisi desibeliä ennen ohjearvoon vertaamista. Koska ohjearvo sisältää jo tyypillisen tuulivoimamelun piirteet, edellä mainitut äänenpiirteiden tulee olla tuulivoimalalle epätyypillisen voimakkaita, jotta mallinnustuloksissa täytyy huomioida viiden desibelin lisä äänenvoimakkuuteen.

*Taulukko 6. Valtioneuvoston asetuksen mukaiset tuulivoimaloiden melutason toimenpiderajat (Valtioneuvoston asetus 27.8.2015).*

Vaikutuskohde	Päivä (7-22)	Yö (22-7)
Pysyvä asutus	45 dB	40 dB
Loma-asutus	45 dB	40 dB
Hoitolaitokset	45 dB	40 dB
Oppilaitokset	45 dB	—
Virkistysalueet	45 dB	—
Leirintäalueet	45 dB	40 dB
Kansallispuistot	40 dB	40 dB

Sosiaali- ja terveysministeriön asetuksessa (545/2015) on annettu matalataajuiselle melulle toimenpiderajoja. Toimenpiderajat koskevat asuinhuoneita ja ne on annettu taajuuspainottamattomina yhden tunnin keskiäänitasoina tersseittäin. Toimenpiderajat koskevat yöaikaa ja päivällä sallitaan 5 dB suuremmat arvot.

*Taulukko 7. Matalataajuisen sisämelun tunnin keskiäänitason toimenpiderajat nukkumiseen tarkoitetuissa tiloissa.*

Terssikaista Hz	20	25	31,5	40	50	63	80	100	125	160	200
Keskiäänitaso LZeq,1h, dB	74	64	56	49	44	42	40	38	36	34	32
Edellisestä laskettu keski-äänitaso A-painotettuna LAeq,1h, dB	24	19	17	14	14	16	18	19	20	21	21

Lisäksi yöaikainen mahdollisesti unihäiriötä aiheuttava melu, joka erottuu selvästi taustamelusta, ei saa ylittää 25 dB yhden tunnin keskiäänitasona LAeq,1h mitattuna niissä tiloissa, jotka on tarkoitettu nukkumiseen.

11.10.2023

---

### 2.3.2 Varjostus

Suomessa ei ole viranomaisten antamia yleisiä määräyksiä tuulivoimaloiden muodostaman varjostuksen enimmäiskestoista eikä varjonmuodostuksen arviointiperusteista. Ympäristöministeriön tuulivoimarakentamisen suunnitteluohjeistuksessa esitetään käytettäväksi muiden maiden suosituksia välkkeen rajoittamisesta (Ympäristöministeriö 2012).

Useissa maissa on annettu raja-arvoja tai suosituksia hyväksyttävän välkevaikutuksen määrästä. Esimerkiksi Ruotsissa suositus on kahdeksan tuntia vuodessa ja 30 minuuttia päivässä.

Arvioinnissa on tarkasteltu vaikutuksia alueella, jossa varjoja tai välkettä mallinnuksen mukaisessa todellisessa tilanteessa ("real case") esiintyy vähintään kahdeksan tuntia vuodessa.

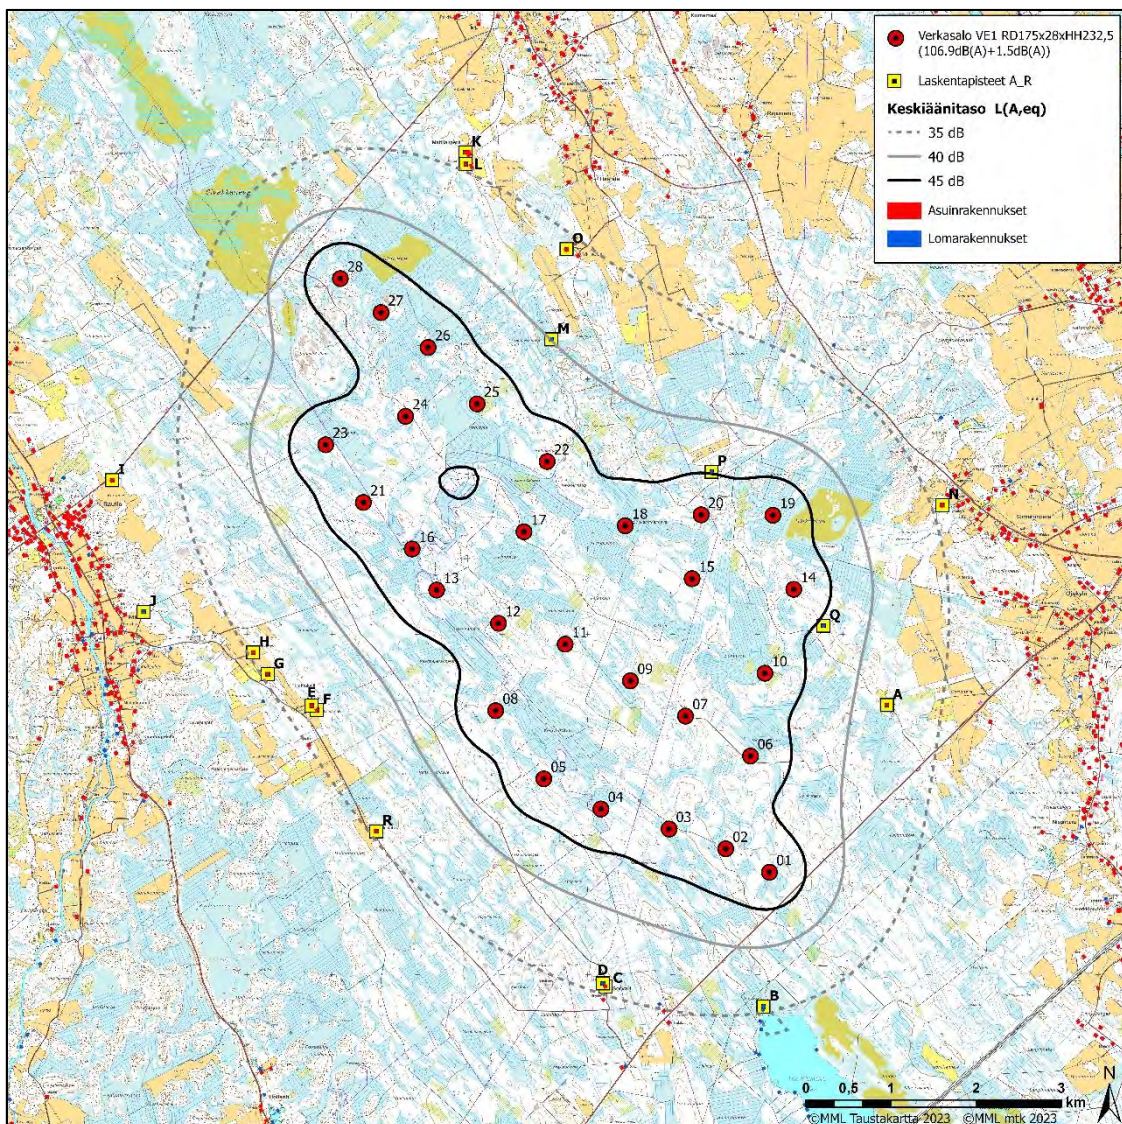

11.10.2023

## MELU- JA VARJOSTUSMALLINNUSTEN TULOKSET

### 3.1 Melumallinnus

#### 3.1.1 Melun laskentatulokset ISO 9613-2 voimalaitoksella Nordex N175 - 6.8MW (106,9 dB(A) + 1,5 dB(A))

Vaihtoehdon 1 (VE1) melumallinnuksen mukaan melutaso 40 dB(A) ylittyy lähimmillä lomarakennuksilla laskentapisteissä Lomarakennus P (44,7 dB(A)) ja Lomarakennus Q (44,2 dB(A)), (Kuva 1 ja Taulukko 8). Katso tarkemmat laskentatulokset liitteestä 1.

Kuva 1. Melumallinnuksen tulos VE1.

Vaihtoehdon 1 (VE1) melun yhteisvaikutukset Hangaskurunkankaan hankkeen kanssa on esitetty kuvassa 2 ja taulukossa 9. Melumallinnuksen tulosten mukaan melutaso 40 dB(A) ylittyy samoissa laskentapisteissä kuin huomioitaessa ainoastaan Verkasalon vaihtoehdon 1 voimalat. Myös melutasot

11.10.2023

kyseisissä laskentapisteissä ovat samat, joten Hangaskurunkankaan hankkeen huomiointi ei aiheuta lisämelua näissä laskentapisteissä. Katso tarkemmat laskentatulokset liitteestä 2.

Kuva 2. Melumallinnuksen tulos Verkasalo VE1 yhdessä Hangaskurunkankaan hankkeen kanssa.

11.10.2023

Vaihtoehdon 2 (VE2) melumallinnuksen tulosten mukaan melutaso 40 dB(A) ylittyy laskentapisteissä Lomarakennus M (40,4 dB(A)), Lomarakennus P (45,0 dB(A)) ja Lomarakennus Q (44,6 dB(A)) (Kuva 3, Taulukko 10). Katso tarkemmat laskentatulokset liitteestä 3.

11.10.2023

Kuva 3. Melumallinnuksen tulos VE2.

Vaihtoehdon 2 (VE2) melun yhteisvaikutukset Hangaskurunkankaan hankkeen kanssa on esitetty kuvassa 4 ja taulukossa 11. Melumallinnuksen tulosten mukaan melutaso 40 dB(A) ylittyy samoissa laskentapisteissä kuin huomioitaessa ainoastaan Verkasalon vaihtoehdon 2 voimat. Myös melutasot kyseisissä laskentapisteissä ovat samat, joten Hangaskurunkankaan hankkeen huomiointi ei aiheuta lisämelua näissä laskentapisteissä. Katso tarkemmat laskentatulokset liitteestä 4.

### 3.1.2 Matalataajuiset melutasot voimalaitoksella Nordex N175 - 6.8MW STE (106,9 dB(A) + 1,5 dB(A))

Sisätilojen laskennallisia tuloksia on verrattu Sosiaali- ja terveysministeriön (STM) Asumisterveysasetuksessa (545/2015) annettuihin toimenpiderajoihin. Nämä ovat enimmäisarvoja, jotka on laadittu yöaikaiselle melulle nukkumiseen tarkoitettuihin tiloihin. Toimenpiderajaa on verrattu myös äänitasoon tarkasteltujen rakennusten ulkopuolella.

Mallinnettaessa Verkasalon tuulivoimahankkeen matalataajuisia melutasoja voimalaitostyyppillä Nordex N175 - 6.8MW vaihtoehdoissa VE 1 ja VE 2, ei matalataajuinen melu ylitä Sosiaali- ja terveysministeriön asumisterveysohjearvoa laskentapisteissä A – R. Taulukossa 12 on esitetty matalataajuisen melun laskentatulokset vaihtoehdossa VE 1 ja taulukossa 13 matalataajuisen melun laskentatulokset vaihtoehdossa VE 2. Taulukoissa näkyy toimenpiderajan alitus (negatiivinen arvo) tai ylitys (positiivinen arvo). Rakennusten sisätiloissa melu on hankevaihtoehdossa VE 1 enimmillään 0,5 dB alle toimenpiderajan taajuudella 63 Hz ja hankevaihtoehdossa VE 2 enimmillään 0,01 dB alle toimenpiderajan taajuudella 63 Hz (lomarakennus P). Katso tarkemmat laskentatulokset liitteistä 5 ja 7.

### 3.1.4 Kuntakohtaiset matalataajuiset melutasot voimalaitoksella Nordex N175 - 6.8MW STE (106,9 dB(A) + 1,5 dB(A))

Verkasalon tuulivoimahankkeen Alavieskan kunnan alueella sijaitsevien voimaloiden aiheuttamat matalataajuiset melutasot vaihtoehdossa 1 (VE 1) on esitetty taulukossa 22. Huomioitaessa ainoastaan Alavieskan kunnan alueella sijaitsevat voimalat, ei melu ylitä Sosiaali- ja terveysministeriön asuimisterveysohjearvoa laskentapisteissä A – R. Taulukoissa näkyy toimenpiderajan alitus (negatiivinen arvo) tai ylitys (positiivinen arvo). Rakennusten sisätiloissa melu on enimmillään 2 dB alle toimenpiderajan taajuudella 63 Hz (Lomarakennus P).

11.10.2023

*Taulukko 22. Matalataajuisen melun laskentatulokset VE1 vain Alavieskan kunnan alueella olevilla voimaloilla laskettuna.*

**Liite 1. Verkasalon tuulivoimahanke - Melun leviämismallinnuksen tulokset ISO 9613-2, YM 2 /2014 (VE1) N175 – 6.8 MW**

## DECIBEL - Main Result

Calculation: Verkasalo\_VE1\_RD175x28xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

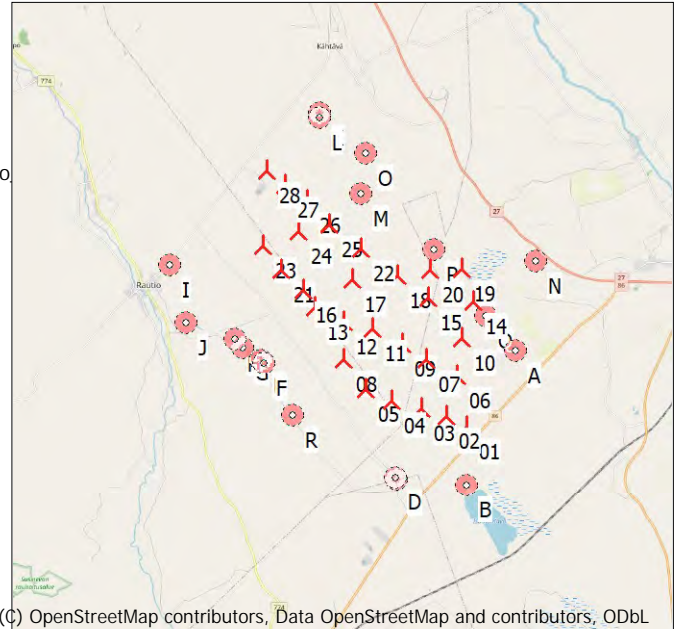

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more

restrictive, positive is less restrictive.:

0,0 dB(A)

All coordinates are in

Finish TM ETRS-TM35FIN-ETRS89

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE1\_RD175x28xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo\_10.w2r (9)

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

Octave data required

Frequency dependent air absorption

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE1\_RD175x28xHH232,5\_106.9dB+Hangaskurunkangas\_RD200x9xHH200\_107.8dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo\_10.w2r (9)

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

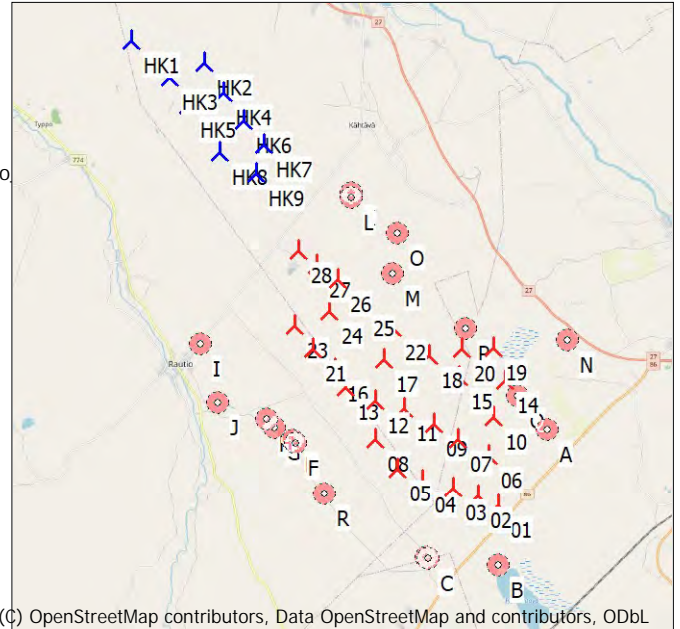

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE2\_RD175x33xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo\_10.w2r (9)

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

Octave data required

Frequency dependent air absorption

### DECIBEL - Map 8,0 m/s

Calculation: Verkasalo\_VE2\_RD175x33xHH232,5\_106.9dB

Map: EMD OpenStreetMap , Print scale 1:75 000, Map center Finish TM ETRS-TM35FIN-ETRS89 East: 369 673 North: 7 107 690  
New WTG Noise sensitive area  
Noise calculation model: ISO 9613-2 General. Wind speed: 8,0 m/s  
Height above sea level from active line object

11.10.2023

---

**Liite 4. Verkasalon tuulivoimahanke - Melun leviämismallinnuksen tulokset ISO 9613-2, YM 2 /2014 (VE2) N175 – 6.8 MW. Yhteisvaikutukset Hangaskurunkankaan hankkeen kanssa.**

## DECIBEL - Main Result

Calculation: Verkasalo\_VE2\_RD175x33xHH232,5\_106.9dB+Hangaskurunkangas\_RD200x9xHH200

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

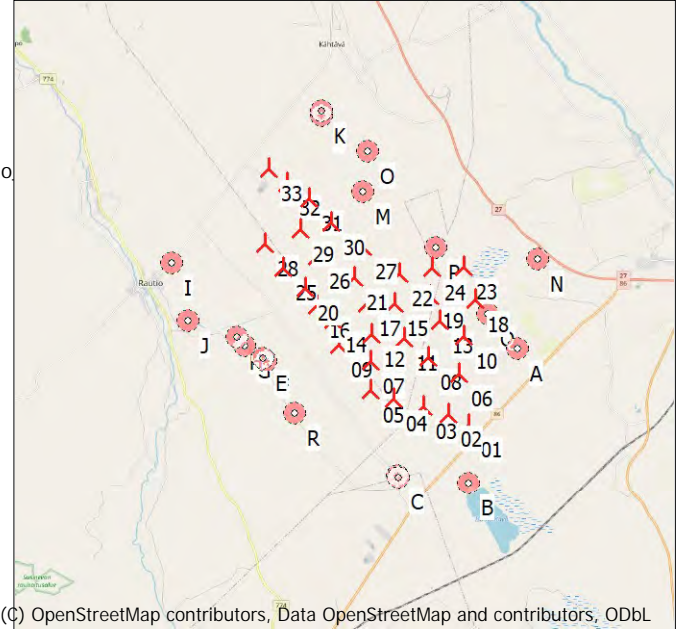

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

All coordinates are in

Finish TM ETRS-TM35FIN-ETRS89

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE2\_RD175x33xHH232,5\_106.9dB+Hangaskurunkangas\_RD200x9xHH200

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo\_10.w2r (9)

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

Octave data required

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE1\_Alavieska\_RD175x15xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo\_10.w2r (9)

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

Octave data required

Frequency dependent air absorption

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE1\_Ylivieska\_RD175x8xHH232,5\_106.9dB

Noise sensitive area: D Laskentapiste\_D (Sorvari)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: E Laskentapiste\_E (Huhtakylä)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: F Laskentapiste\_F (Huhtakylä)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: G Laskentapiste\_G (Viljamaa)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: H Laskentapiste\_H (Karjaneva)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: I Laskentapiste\_I (Rautio)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: J Laskentapiste\_J (Pöllä)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: K Laskentapiste\_K (Mattilanperä)

Predefined calculation standard:

Immission height(a.g.l.): Use standard value from calculation model

Uncertainty margin: Use default value from calculation model

Noise demand: 40,0 dB(A)

No distance demand

Noise sensitive area: L Laskentapiste\_L (Mattilanperä)

New WTG

Noise sensitive area

Noise calculation model: ISO 9613-2 General. Wind speed: 8,0 m/s  
Height above sea level from active line object

11.10.2023

---

**Liite 10. Verkasalon tuulivoimahanke - Kuntakohtaiset melun leviämismallinnuksen tulokset ISO 9613-2, YM 2 /2014 (VE2) N175 – 6.8 MW**

## DECIBEL - Main Result

Calculation: Verkasalo\_VE2\_Alavieska\_RD175x19xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

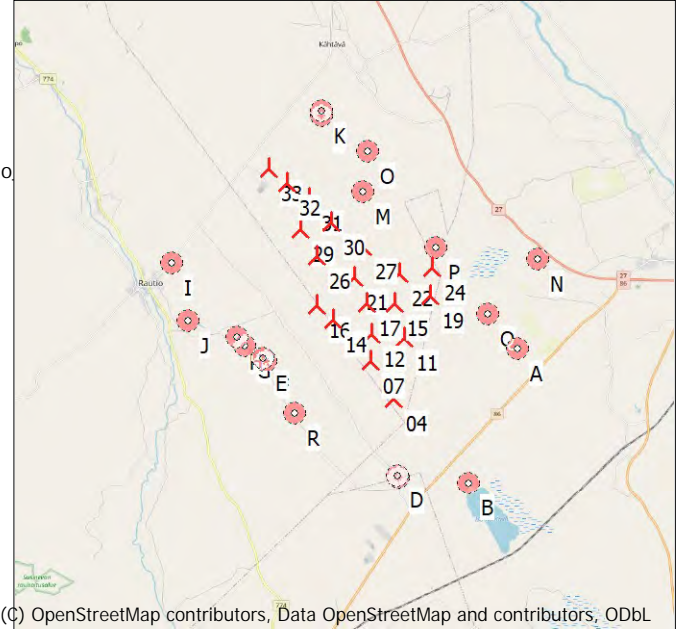

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more

restrictive, positive is less restrictive.:

0,0 dB(A)

(C) OpenStreetMap contributors, Data OpenStreetMap and contributors, ODbL

Scale 1:200 000

## DECIBEL - Assumptions for noise calculation

Calculation: Verkasalo\_VE2\_Alavieska\_RD175x19xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo\_10.w2r (9)

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more restrictive, positive is less restrictive.:

0,0 dB(A)

Octave data required

Noise sensitive area

Noise calculation model: ISO 9613-2 General. Wind speed: 8,0 m/s  
Height above sea level from active line object

## DECIBEL - Main Result

Calculation: Verkasalo\_VE2\_Ylivieska\_RD175x9xHH232,5\_106.9dB

Noise calculation model:

ISO 9613-2 General

Wind speed (in 10 m height):

8,0 m/s

Ground attenuation:

General, terrain specific

Ground factor for porous ground: 0,4

Area object with hard ground: Area object (Roughness): REGIONS\_Verkasalo

Area type with hard ground: Vesistöt

Ground factor for hard ground: 0,0

Meteorological coefficient, CO:

0,0 dB

Type of demand in calculation:

1: WTG noise is compared to demand (DK, DE, SE, NL etc.)

Noise values in calculation:

All noise values are mean values (Lwa) (Normal)

Pure tones:

Ignore pure tones setting on WTG

Height above ground level, when no value in NSA object:

4,0 m; Don't allow override of model height with height from NSA object

Uncertainty margin:

0,0 dB; Uncertainty margin in NSA has priority

Deviation from "official" noise demands. Negative is more

restrictive, positive is less restrictive.:

0,0 dB(A)

All coordinates are in

Finish TM ETRS-TM35FIN-ETRS89

## SHADOW - Main Result

Calculation: Verkasalo\_VE1\_RD200x28xHH220\_Valke\_20230626\_real case\_no forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Obstacles used in calculation  
Receptor grid resolution: 1,0 m

All coordinates are in  
Finish TM ETRS-TM35FIN-ETRS89

28	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (439)	2:21

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	426	388	391	554	792	1 006	1 143	936	672	564	618	8 086

Idle start wind speed: Cut in wind speed from power curve

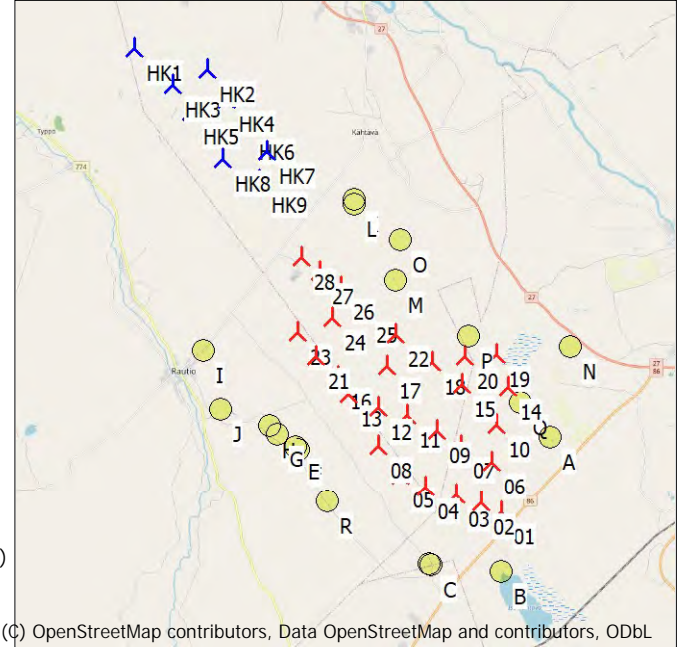

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Obstacles used in calculation  
Receptor grid resolution: 1,0 m

All coordinates are in  
Finish TM ETRS-TM35FIN-ETRS89

### WTGs

	East	North	Z	Row data/Description	WTG type			Power, rated [kW]	Rotor diameter [m]	Hub height [m]	Shadow data	
					Valid	Manufact.	Type-generator				Calculation distance [m]	RPM [RPM]

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_RD200x33xHH220\_Valke\_20230626\_real case\_no forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

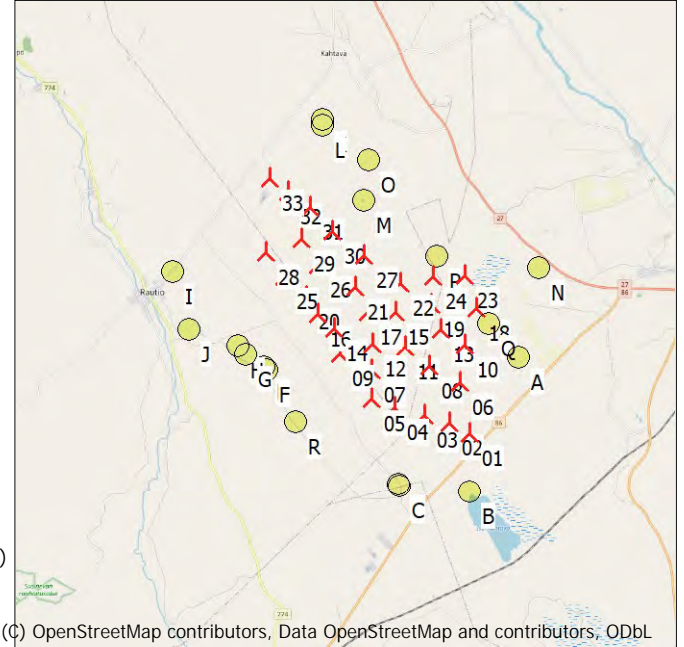

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Obstacles used in calculation  
Receptor grid resolution: 1,0 m

All coordinates are in  
Finish TM ETRS-TM35FIN-ETRS89

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_RD200x33xHH220+Hangaskurunkangas\_RD200x9xHH200\_Valke\_real case\_no forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	426	388	391	554	792	1 006	1 143	936	672	564	618	8 087

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Obstacles used in calculation  
Receptor grid resolution: 1,0 m

All coordinates are in  
Finish TM ETRS-TM35FIN-ETRS89

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
0,77 2,46 4,42 6,93 8,81 9,87 9,13 6,84 4,43 2,23 0,93 0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
597 427 389 391 555 793 1 007 1 145 937 673 565 619 8 097  
Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

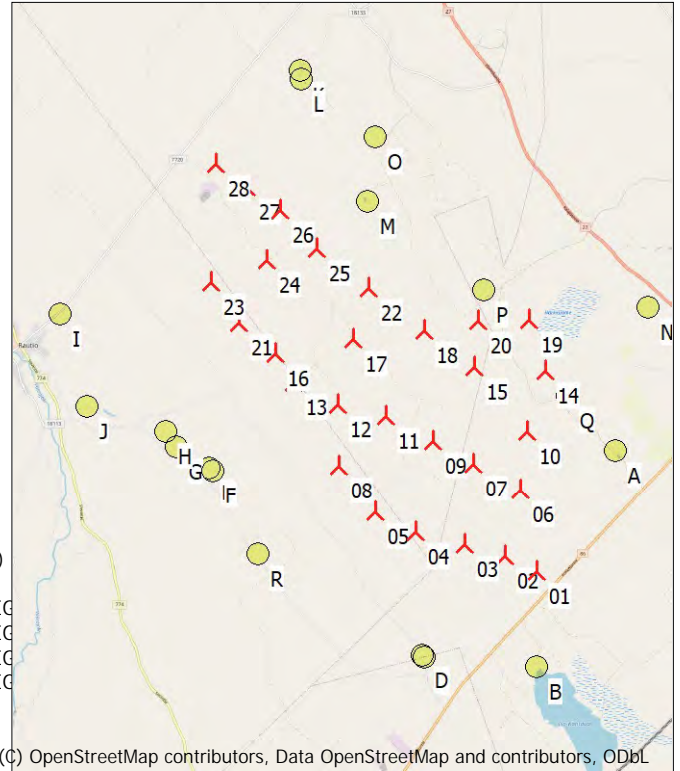

Obstacles used in calculation

Receptor grid resolution: 1,0 m

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)

Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Obstacles used in calculation

Receptor grid resolution: 1,0 m

All coordinates are in

Finish TM ETRS-TM35FIN-ETRS89

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_RD200x33xHH220\_Valke\_real case\_Luke forest\_05102023

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)

Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

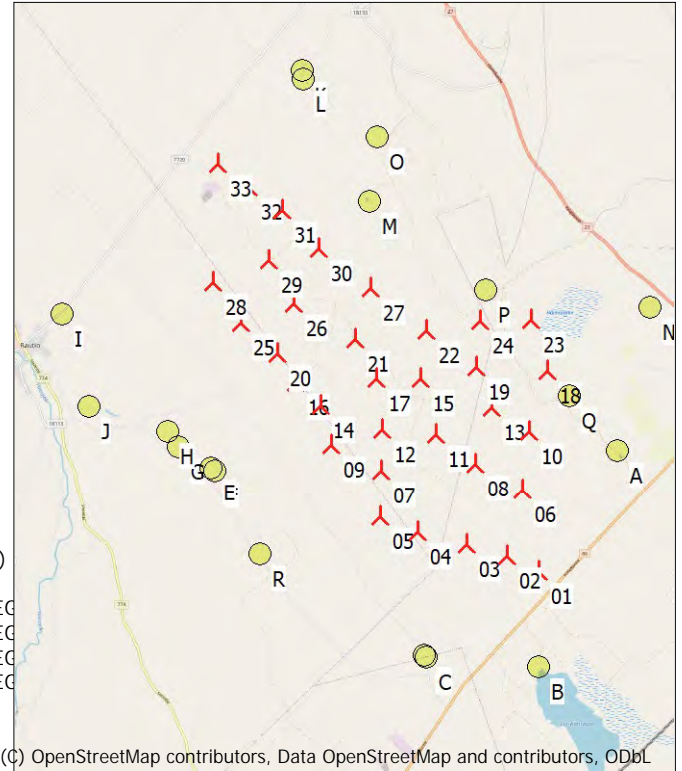

Obstacles used in calculation

Receptor grid resolution: 1,0 m

All coordinates are in

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_RD200x33xHH220+Hangaskurunkangas\_RD200x9xHH200\_Valke\_real case\_Luke forest\_05102023

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	426	388	391	554	792	1 006	1 143	936	672	564	618	8 087

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)

Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Obstacles used in calculation

Receptor grid resolution: 1,0 m

All coordinates are in

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Calculation: Verkasalo\_VE1\_Alavieska\_RD200x15xHH220\_Valke\_real case\_no forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

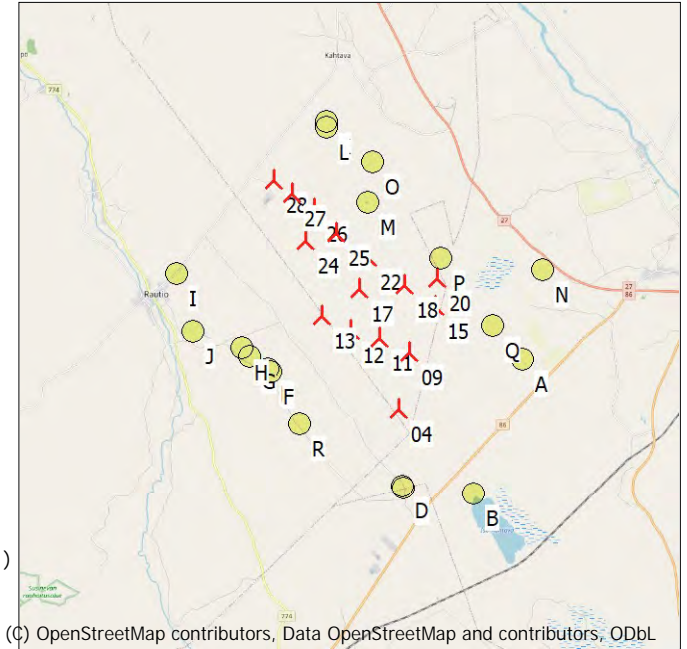

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Obstacles used in calculation  
Receptor grid resolution: 1,0 m

All coordinates are in

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

14	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (557)	6:21
19	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (555)	10:46

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_Alavieska\_RD200xxHH220\_Valke\_real case\_no forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)  
Obstacles used in calculation  
Receptor grid resolution: 1,0 m

All coordinates are in  
Finish TM ETRS-TM35FIN-ETRS89

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE1\_Alavieska\_RD200x15xHH220\_Valke\_real case\_Luke forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)

Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REG

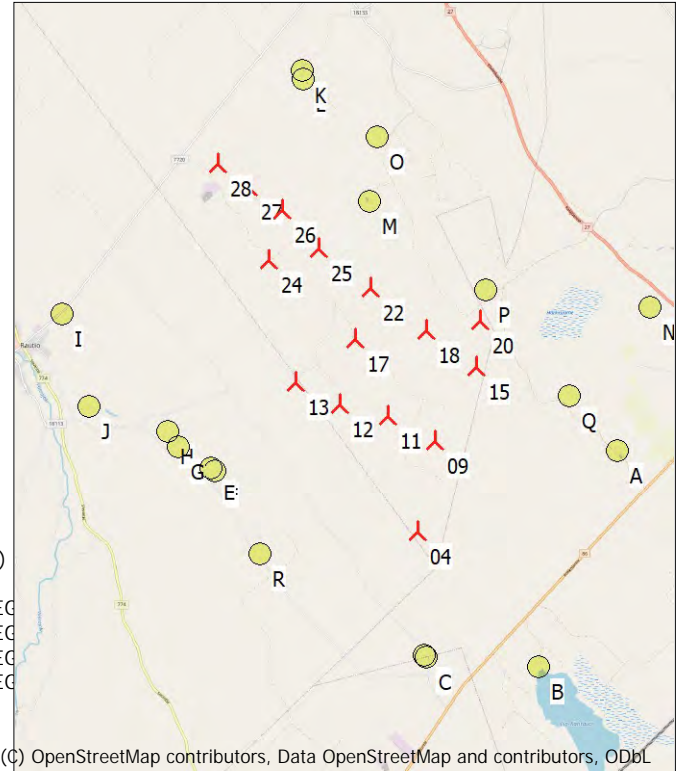

Obstacles used in calculation

Receptor grid resolution: 1,0 m

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_Alavieska\_RD200xxHH220\_Valke\_real case\_Luke forest

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

## SHADOW - Main Result

Calculation: Verkasalo\_VE2\_Ylivieska\_RD200x9xHH220\_Valke\_real case\_Luke forest

### Assumptions for shadow calculations

Maximum distance for influence 2 500 m  
Minimum sun height over horizon for influence 3 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
0,77	2,46	4,42	6,93	8,81	9,87	9,13	6,84	4,43	2,23	0,93	0,26

Operational hours are calculated from WTGs in calculation and wind distribution:

MERRA-2\_N64,00\_E024,375 (4)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
597	427	389	391	555	793	1 007	1 145	937	673	565	619	8 097

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE\_Verkasalo\_1.wpo (1)

Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REC

Obstacles used in calculation

Receptor grid resolution: 1,0 m

All coordinates are in

## Calculation Results

Shadow receptor

No.	Name	Shadow, expected values Shadow hours per year [h/year]
A	Laskentapiste_A (Oivo)	2:30
B	Laskentapiste_B (Järviojanniittu)	0:00
C	Laskentapiste_C (Sorvari)	0:00
D	Laskentapiste_D (Sorvari)	2:39
E	Laskentapiste_E (Huhtakylä)	0:00
F	Laskentapiste_F (Huhtakylä)	0:00
G	Laskentapiste_G (Viljamaa)	0:00
H	Laskentapiste_H (Karjaneva)	0:00
I	Laskentapiste_I (Rautio)	0:00
J	Laskentapiste_J (Pöllä)	0:00
K	Laskentapiste_K (Mattilanperä)	0:00
L	Laskentapiste_L (Mattilanperä)	0:00
M	Laskentapiste_M (Tiennevanperä)	0:00
N	Laskentapiste_N (Mäntylä)	0:00
O	Laskentapiste_O (Nevaranta)	0:00
P	Laskentapiste_P (Niisineva)	0:00
Q	Laskentapiste_Q (Rinkkala-Kähtävä metsätie)	16:20
R	Laskentapiste_R (Huhtala)	0:00

Total amount of flickering on the shadow receptors caused by each WTG

No.	Name	Expected [h/year]
01	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (585)	0:00
02	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (590)	2:39
03	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (591)	0:00
06	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (586)	1:59
08	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (592)	1:36
10	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (588)	8:06
13	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (593)	4:33
18	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (589)	2:30
23	Generic RD200 HH220 7200 200.0 !O! hub: 220,0 m (TOT: 320,0 m) (587)	0:00

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.
